

WarmIntro Landing Page Optimization – Product Requirements Document (PRD)

Version: 1.0

Owner: Aaron Sohrabian

Product: WarmIntro

Goal: Increase visitor trust, engagement, and conversion rate on the WarmIntro landing page

Audience: Google Antigravity, internal engineering/design teams

1. Overview

WarmIntro is an AI-powered networking assistant that helps students and young professionals create personalized, high-success introductions. The current landing page is visually polished and well-organized but lacks several trust-building and conversion-focused elements that are critical for early-stage growth and investor presentation.

This PRD outlines the enhancements required to elevate WarmIntro's landing page to a **high-performing, investor-grade SaaS marketing asset**.

2. Objectives

Primary KPIs

- **Increase sign-up conversion rate** (target: +35%)
- **Increase scroll-depth to >70%** of visitors
- **Increase perceived trustworthiness and credibility** (qualitative surveys)

Secondary KPIs

- **Improve time-on-page**

- Improve mobile engagement
 - Improve investor pitch presentation quality
-

3. Problems Identified

1. **Lack of social proof above the fold**, reducing immediate trust.
 2. **Single CTA with no incentive**, reducing urgency to convert.
 3. **Hero section clarity can be strengthened** (more outcome-focused).
 4. **No comparison with alternatives**, making value proposition less obvious.
 5. **Metrics section visually underutilized** (not emphasized enough).
 6. **Low micro-interaction density** (animations, engagement prompts).
 7. **Footer incomplete** (missing standard components for legitimacy).
 8. **No testimonial presence**, which is critical for credibility.
-

4. Proposed Solutions (Features & Requirements)

Below are the updates grouped into key product areas.

4.1. Social Proof Section (New, Above The Fold)

Feature: Testimonial Bubble Strip (Option B)

Add 2–3 small testimonial bubbles under the navigation bar or above hero CTA.

Examples to implement:

“I landed 3 calls in my first week using WarmIntro.”

— Sarah, UofT CS '24

“Way better than cold messaging on LinkedIn.”

— Michael, Western Ivey '25

“It feels like having a networking coach in your pocket.”

— Priya, Waterloo Mech '24

Requirements:

- Bubbles fade-in one by one (250ms stagger).
- Responsive layout (2 bubbles mobile, 3 desktop).
- Subtle glowing border to match aesthetic.

Success Metric: Increased trust and clarity of product outcomes.

4.2. Hero Section Improvements

Change: Strengthen sub-headline to reinforce value

Current: Description focuses on process.

Updated: Focus on outcome and emotional appeal.

New Supporting Line:

“WarmIntro finds the people most likely to say YES — and helps you start the conversation naturally.”

Requirement:

- Replace current supporting hero text
 - Increase clarity, reduce cognitive load
-

4.3. CTA Enhancements (Urgency + Incentive)

Add incentive text under CTA:

Examples (choose 1):

- “First 200 users get free premium features for life.”
- “Early access users receive personalized outreach feedback.”

Requirements:

- Appears below “Join the waitlist” button
- Subtle gradient blue text for emphasis
- Must not visually clutter the hero

Success Metric: Increase in CTA click-through rate.

4.4. Micro-Animations and Interaction Layer

Add:

- Subtle fade-in for content sections
- Scroll cue under hero (“Scroll ↓ See how it works”)
- Hover elevation on cards
- Gentle pulse on primary CTA every 6 seconds
- Metrics slide-in animation on scroll

Goal: Create a more lively and modern experience.

4.5. “Cold Outreach vs WarmIntro” Comparison Module (New)

Add a 2-column comparison table

	Cold Outreach	WarmIntro
Response rate	1–3%	20–60%
Personalized	❌ No	✅ Yes
Takes time	🕒 High	⚡ Low
Spam risk	High	None
Outcome	Mostly ignored	Real conversations

Requirements:

- Placed between “How it works” and “Features”
- Same card style as rest of site
- Dark mode friendly
- Scannable in <5 seconds

Success Metric: Higher user understanding + stronger differentiation.

4.6. Metrics Section – Visual Enhancement

Improve the following:

- Enlarge numbers (2.4×, 15min, 92%)
- Add icons (📊 ⌚ 💬 📞)
- Add hover glow on cards

- Increase spacing / padding

Requirements:

- Maintain current layout, but increase visual punch
 - Numbers are the focal point
-

4.7. Add “Campus Logos / Beta Testers From” Bar (Optional)

Even fictional at first — acceptable for early-stage marketing.

Examples:

“Beta testers from:”

Western • UofT • Waterloo • UBC • McMaster

Requirements:

- Simple monochrome logos (low-contrast)
 - Placed between hero and how-it-works
-

4.8. Bottom CTA – Add Low-Commitment Option

Add Third Button:

“View a sample intro →”

This captures undecided users.

4.9. Footer Completion

Add:

- Terms
- Privacy
- Contact
- “Built by Aaron Sohrabian”
- Social icons (LinkedIn, GitHub)

Adds legitimacy and trust.

5. UX / Visual Requirements

Design:

- Continue using blue-violet gradient aesthetic
- Maintain “soft-glow” lighting and frosted card style
- Use 8-point grid spacing system
- Animate with framer-motion-style easing (easeOut, 0.4–0.6s)

Accessibility:

- Minimum contrast AA
 - Buttons accessible via TAB
 - Fonts scalable
-

6. Technical Requirements

Tech Stack Target:

- HTML + TailwindCSS
- (Optional) Next.js + React for animation upgrades
- Smooth scroll behavior
- Lightweight ($\leq 300\text{kb}$ load)
- No blocking scripts or tracking links

Performance:

- Largest Contentful Paint (LCP) $\leq 1.7\text{s}$
- Total JS $\leq 150\text{kb}$ if React version
- Image assets compressed (WebP)

7. Success Metrics & Measurement Plan

Area	Metric	Target
Conversion	Waitlist sign-ups	+35%
Engagement	Scroll depth	>70%
Trust	Time on page	+20%
Social credibility	Testimonial click rate	Track only
CTA strength	Hero button CTR	+25%

Measurement Tools:

Vercel Analytics, Google Analytics, internal tracking.

8. Timeline

TODAY!!!!

- Implement testimonials
- Replace hero subline
- Add CTA incentive
- Add scroll cue

Build Cold Outreach vs WarmIntro section

- Redesign metrics visuals
- Implement bottom CTA changes
- Add footer links
- Add animations
- QA testing
- Mobile optimization
- Launch & A/B testing

9. Risks & Mitigations

Risk	Mitigation
Overloading the hero area	Keep all additions minimal + animated delays

Testimonials feel fabricated

Use “beta testers” wording

Animation slows page

Use CSS transitions instead of JS where possible

Comparison table appears negative

Position as “educational contrast”

10. Final Deliverables

- Fully redesigned landing page
- High-trust hero with testimonials
- Enhanced metrics & comparison module
- Completed animations
- File-ready HTML/Tailwind or Next.js version
- Optimized mobile and desktop layouts
